When an excavation will have a depth of more than 15 feet with a slope in excess of one to two, a fence at least six feet high shall be erected to limit access to this area.

(d) *Reduction of dust; recording instruments.*

- (1) Calcium chloride or oil shall be applied to reduce dust and mud on all nonhard-surfaced roads to be used for vehicular ingress or egress to the tract of land on which earth removal is to be conducted.

Groundwater table elevation determinations shall be made on all land from which earth products will be removed. Procedures for groundwater table elevation determinations shall be made in the same manner as required by the department of health in their "Rules and Regulations Establishing Minimum Standards Relating to Location, Design Construction and Maintenance of Individual Sewage Disposal Systems" (R23-1-SD15.00-01 and 02). Sec. 11-36. Approval of the zoning board of review required.

As a condition precedent to the issuance of a license pursuant to section 11-37 hereof, zoning board of review approval of a special exception for earth removal must be obtained, such special exception to be heard and decided consistent with powers granted in Title 45, Chapter 24, Sections 13, 14 and 19 of the General Laws of Rhode Island 1956, as amended, and prior written notice shall be given to the town administrator and planning board of the town. Except as otherwise provided herein, as a condition precedent to granting of a special exception pursuant to this section, the applicant for such special exception shall submit to the zoning board of review for their approval thereof:

- (a) *Site plan.* A site plan at a scale of not less than 100 feet to the inch and with contours of not more than five feet, prepared by a registered engineer, land surveyor or landscape architect, in compliance with the provisions of this article and setting forth:

 - (3) The relation of temporary and future buildings and operations machinery to the removal areas; delineation of removal areas and depths with estimates of cubic yards of material to be removed; fencing; method of removal; distance of excavation to street and lot lines.
- (b) *Restoration plan.* A restoration plan prepared by a registered engineer, land surveyor or landscape architect, in compliance with the provisions of this article, at the same scale required for the site plan in subsection (a) above and setting forth:

 - (2) The final contours of the tract of land with a contour level not exceeding five feet upon completion of earth removal operations; and
 - (3) The type of ground cover to be planted or applied upon completion of earth removal operations to effectively control wind and water erosion; provided

however, if suitable fertile ground cover existed at the beginning of earth removal, enough of said ground cover is to be held in reserve and reapplied for a minimum thickness of three inches.

The said land restoration plan and its implementation applies to the conversion of the site and its planned restoration. It is, therefore, required that:

- (1) Any land restoration plan correspond to a situation which could reasonably occur in the immediate future (zero to five years), and be revised as necessary as the existing physical character of the removal area changes;
- (2) The land restoration plan or any part thereof which reasonably applied to an area shall be put into effect within one year of cessation of normal earth removal operation and completed by the timetable of the restoration plan.

This license shall expire at the end of one year and must be renewed annually, together with application for renewal of an earth removal license for another year. Plans shall be submitted to the zoning inspector showing any change or anticipated change from originally submitted
